IV.	FAQ	43

I. Recommended Setting

Before conducting the test, there is some background information needing clarification:

1. Supported operating systems listed as below
 - (1) Windows 7 32 & 64bit
 - (2) Windows 8 32 & 64bit
 - (3) Windows 8.1 32 & 64 bit
2. ASUS Remote Management Tool (hereinafter referred to as “ASUS RMT”) only works in local area network (LAN)

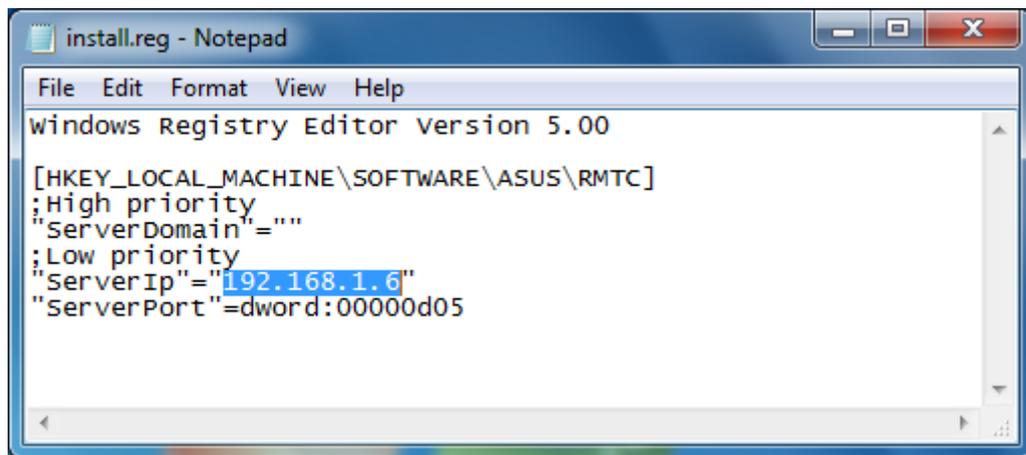

II. Installation

We have two kind of installation method and you can choose the way you like

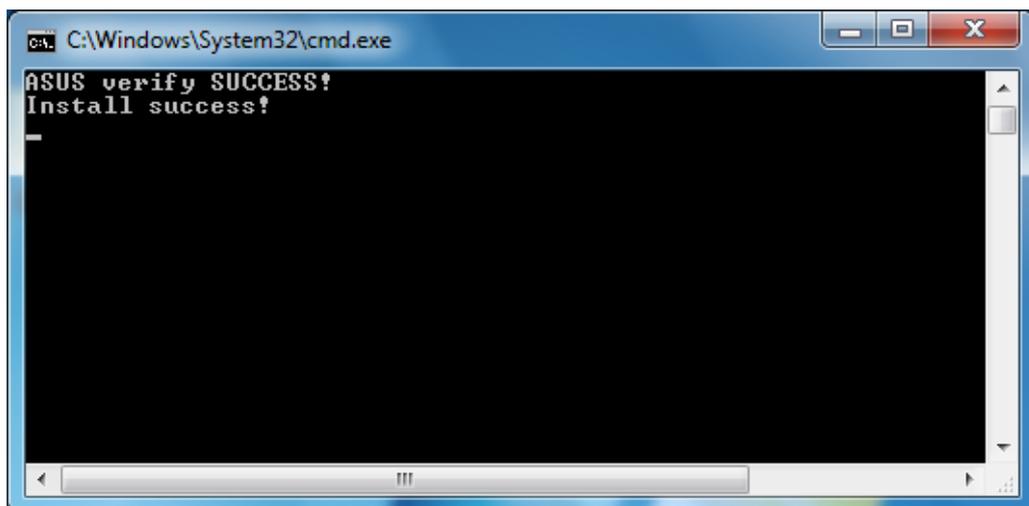

1. zip format

Client setup

1. Copy the client AP folder to each client computer and open it
2. Set the server IP address in “[install.reg](#)”
 - (1) Edit “[install.reg](#)” as Administrator.
 - (2) Change the value of "ServerIp" to your own server IP address.
 - (3) Save and exit.

3. Run “[install.bat](#)” as Administrator.
4. Press any key to finish the setting.

Note:

1. Please follow the instruction to setup each client PC.
2. To uninstall the client, please run “[uninstall.bat](#)” as Administrator”

3. To fully enable all the functions, please apply a special BIOS to your client PC(s) first. We suggest you using BIOS update function of ASUS RMT to save your time.

Server Setup

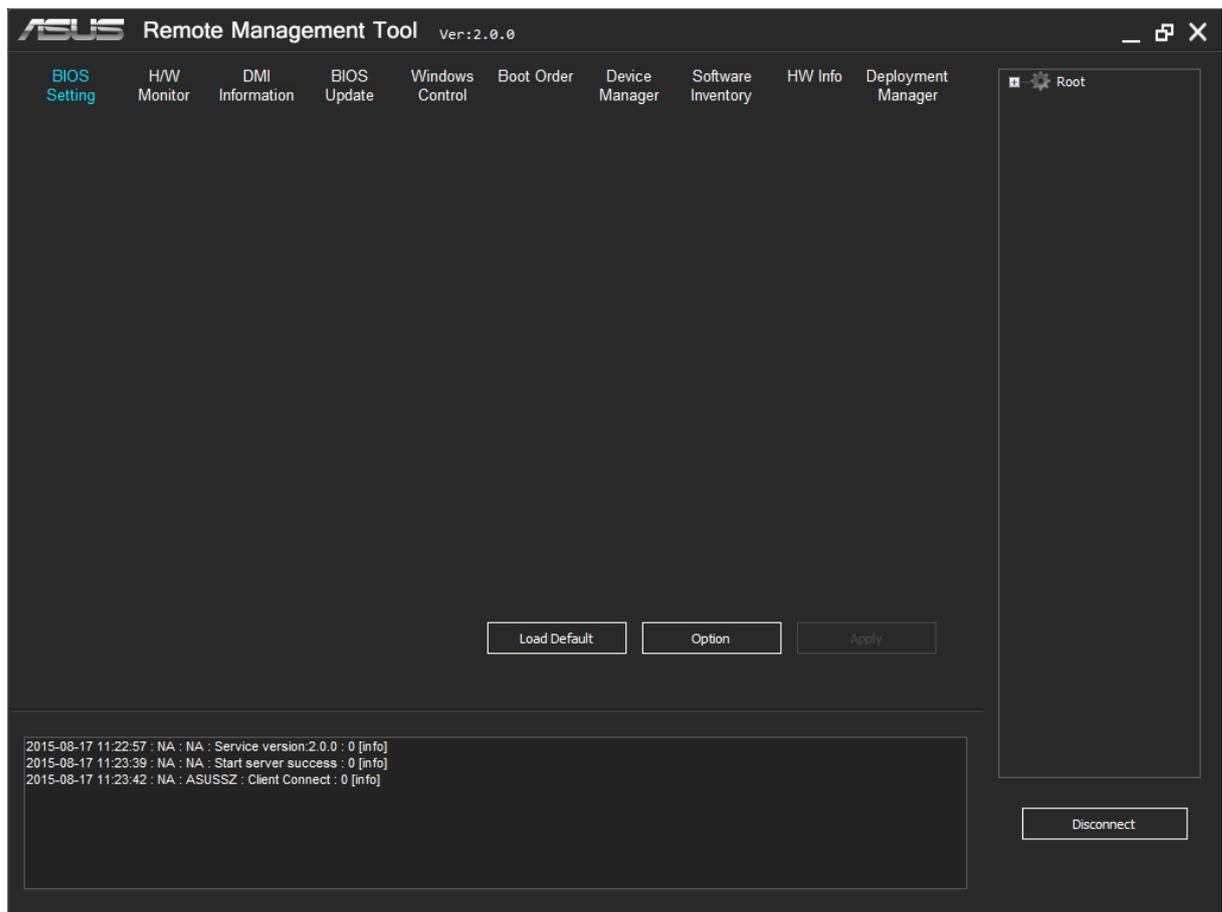

1. Copy the server AP folder to your server PC.
2. Open “**config.ini**” and change related parameters according to below table

	Item	Remark
SOCK_SETTING	SERVER_IP	Please change this item into your own server IP address
	SERVER_PORT	1024~65535
CLIENT_CONFIG	MAX_CLIENT_NUM	
LOG	LOG_FILE_PATH	
	LOG_EDITOR_MAXLINES	
BIOS_UPDATE	MAX_UPDATE_CLIENTS	

3. Run the server AP which named “MainServer” and click “Allow access” when Windows Security Alert dialog appears.

4. Click the “Connect” button on the right side

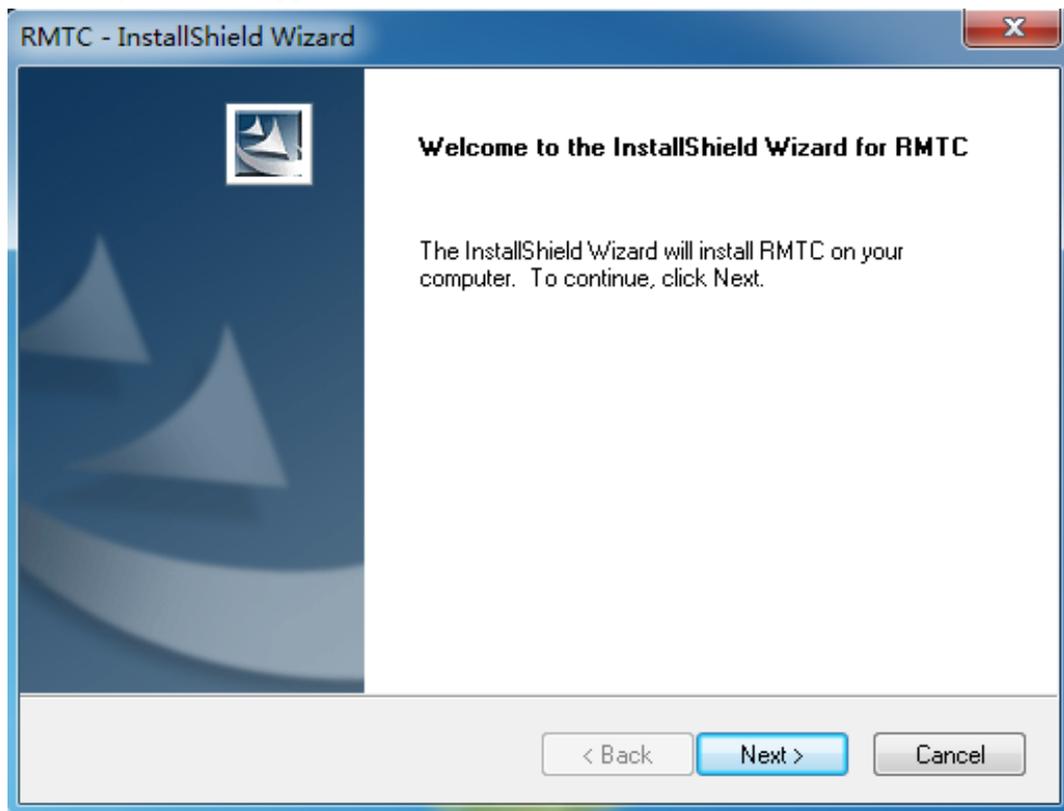

Note:

Before running RMT, please make sure the server and all clients are under the same local network.

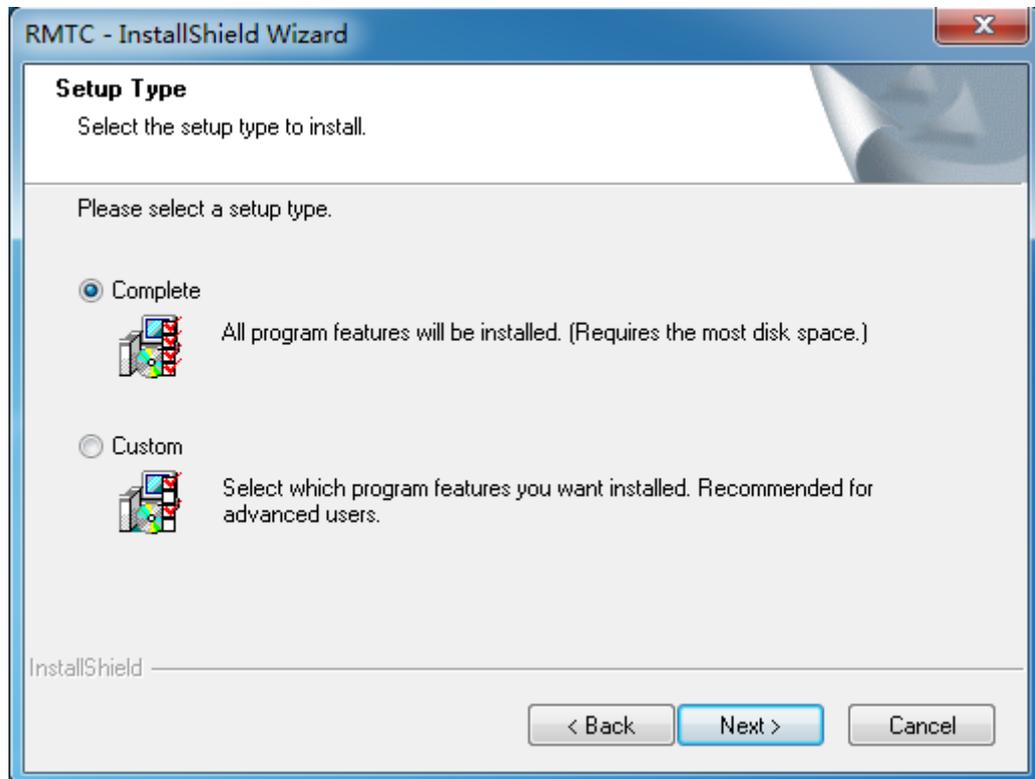

2.exe format

Client setup

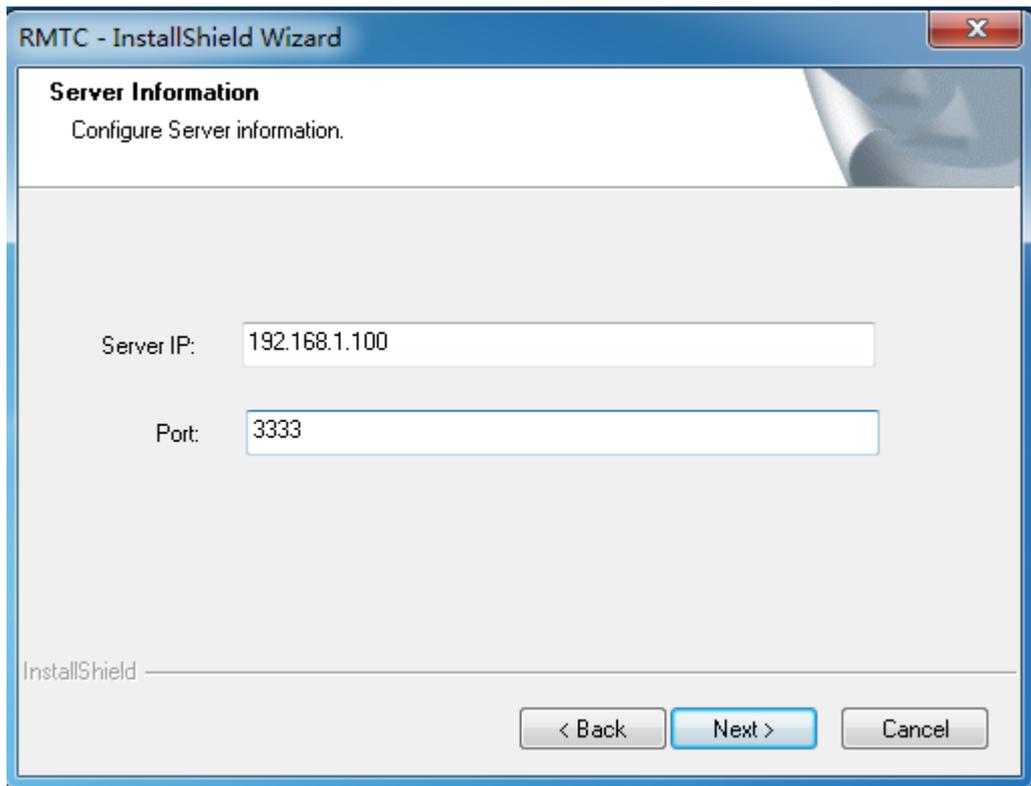

1. Copy the “ASUS Remote Management Tool Client” to one of client computer
2. Click the “ASUS Remote Management Tool Client.exe”
3. The setup interface appears and click “Next”

4. Select the “Complete” and click “Next”

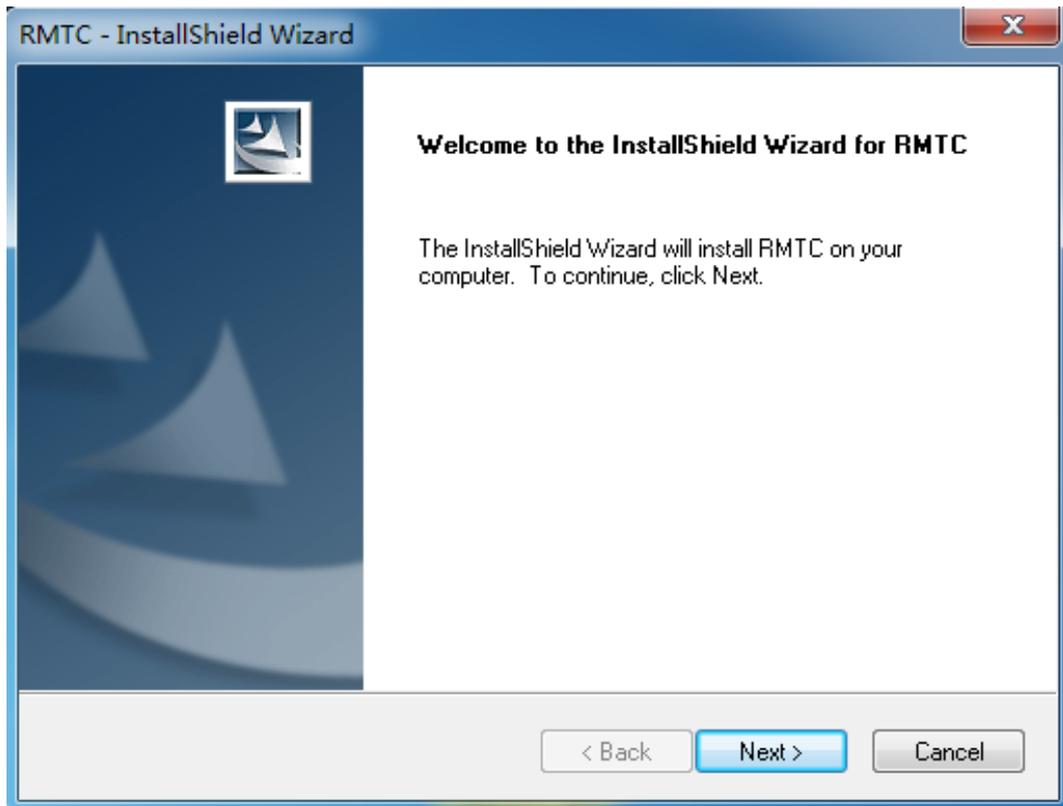

5. Input your server IP and Port

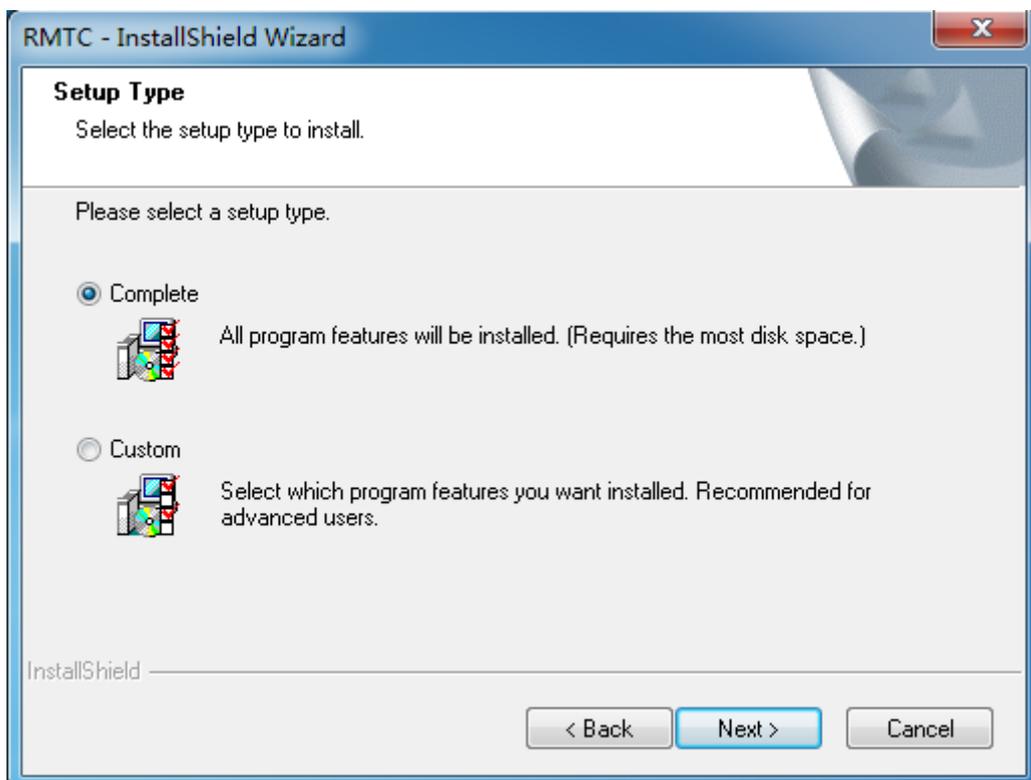

6. Follow the steps in the Install wizard to complete installation

Server Setup

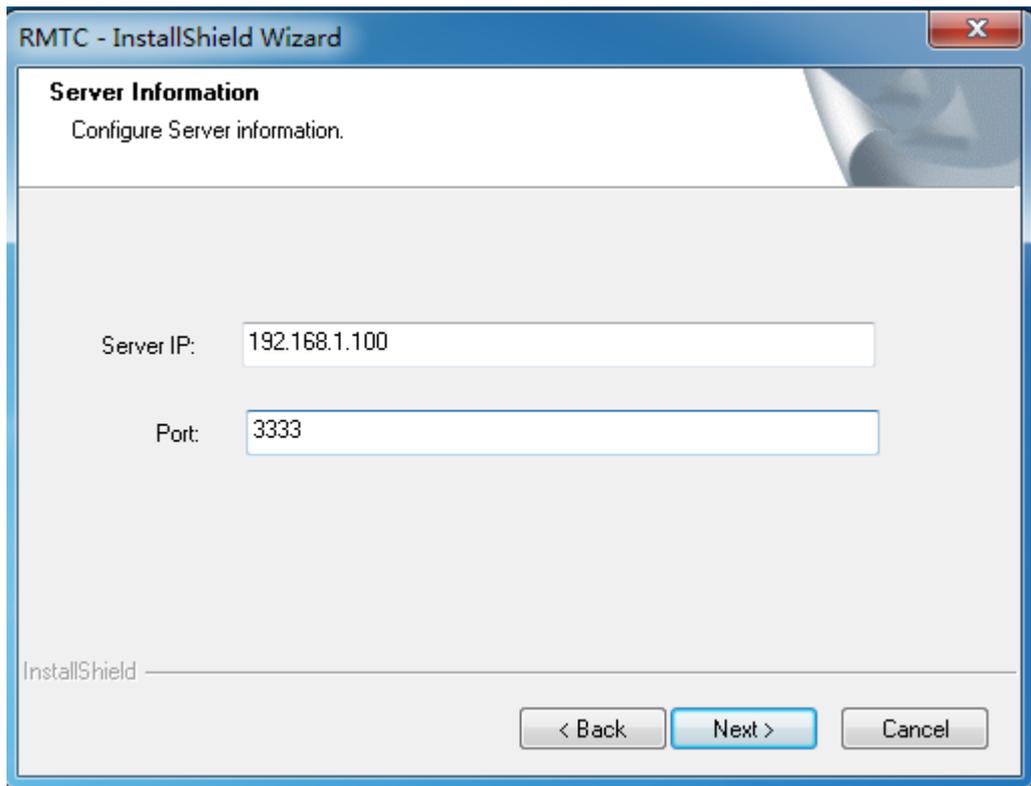

1. Copy the "ASUS Remote Management Tool Server" to your server PC
2. Click the "ASUS Remote Management Tool Server.exe"
3. The setup interface appears and click "Next"

4. Select the “Complete” and click “Next”

5. Input your server IP and Port

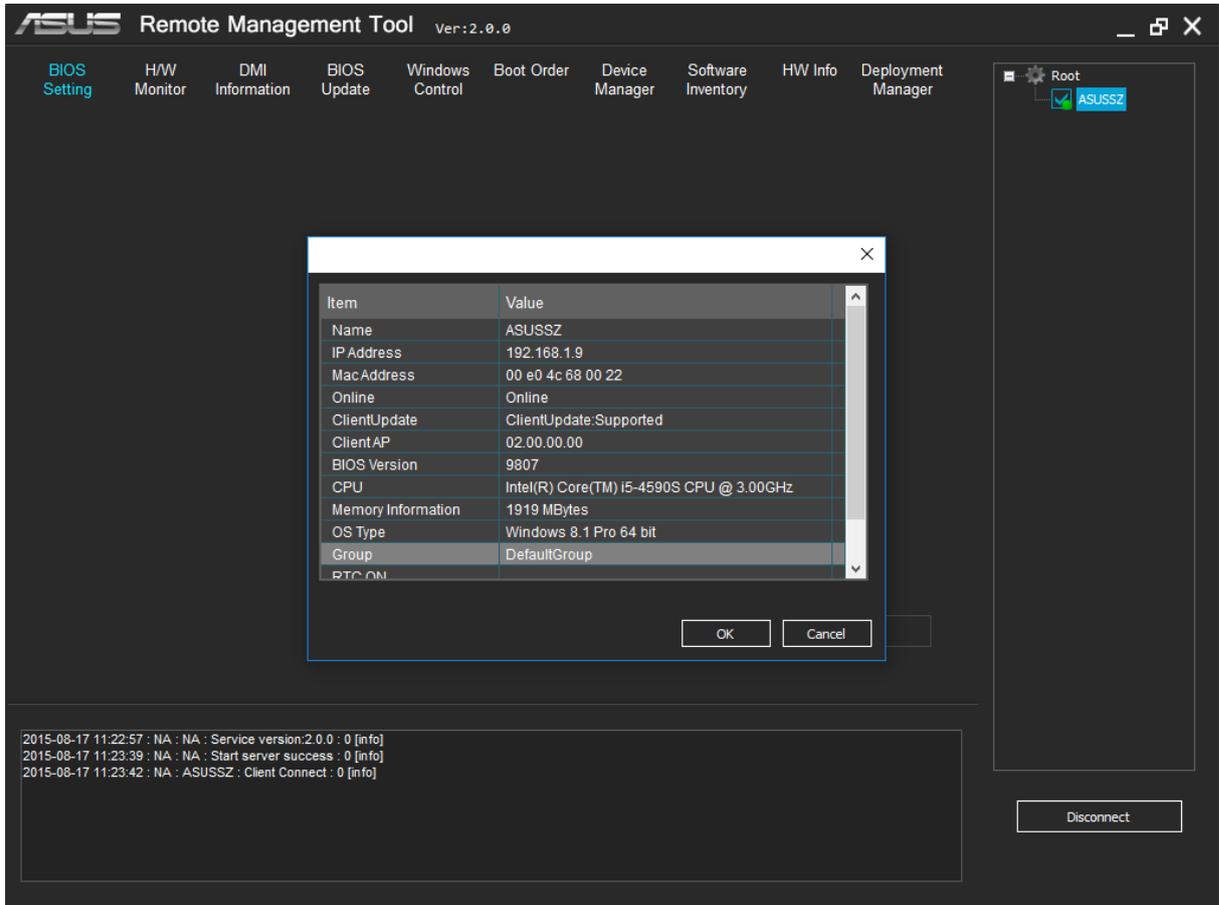

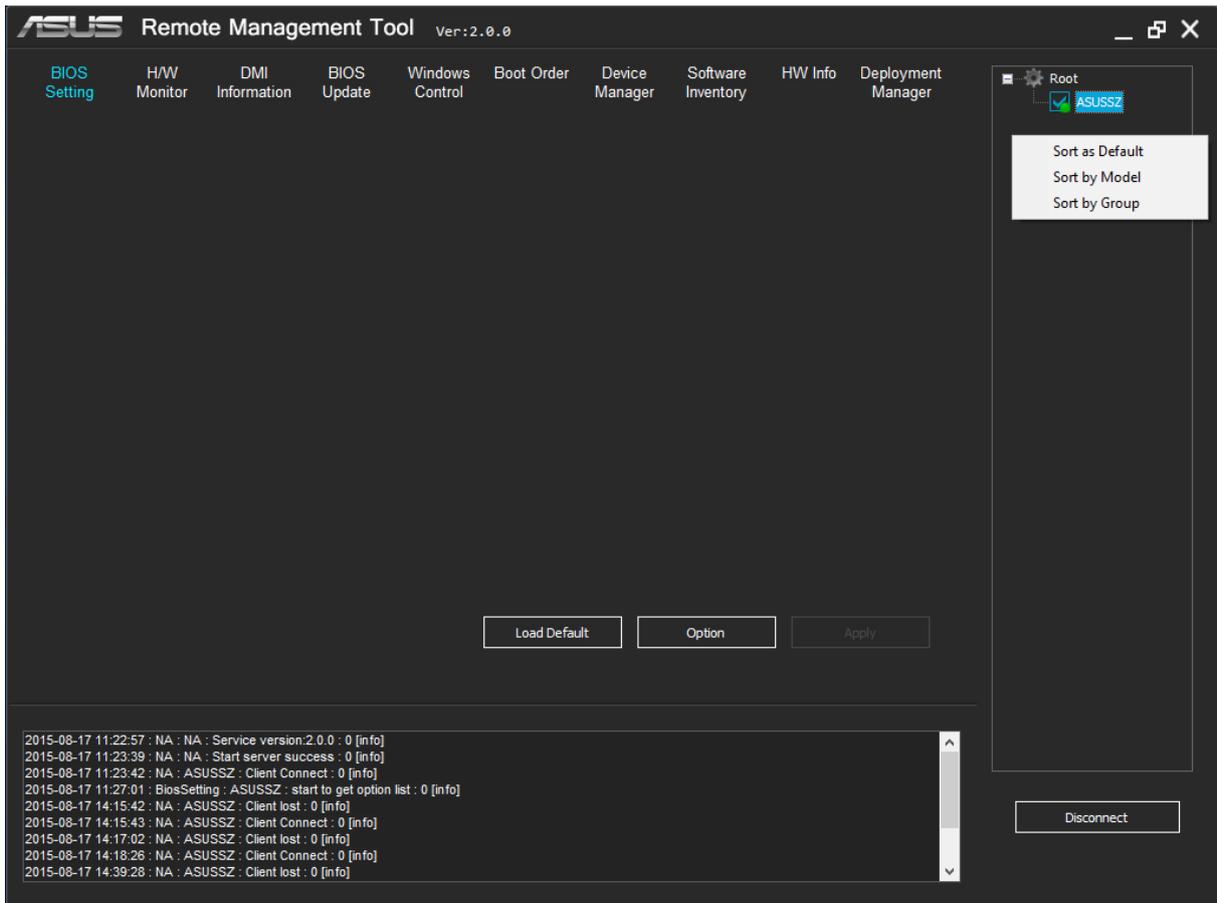

6. Follow the steps in the Install wizard to complete installation

III. Key Features

1. Display Client Information and Grouping

Right click the client name will show a shortcut menu and click the “Client information” to show the detail information of the client. And by editing the “Group” property you can specify which group the client belongs to. Right click in the blank area of the client list you can select the way to sort clients.

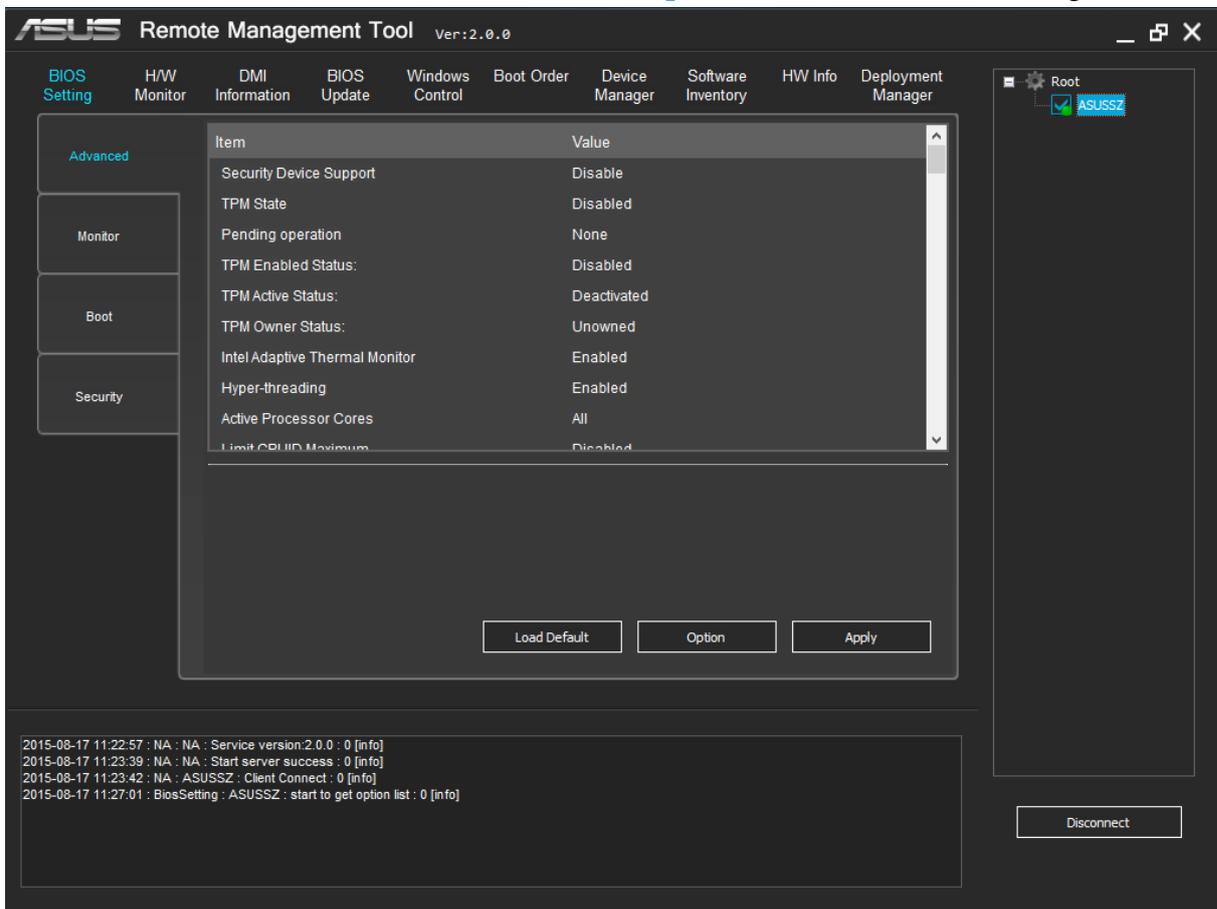

Note:

Green for online

Red for not online

2. BIOS Setting

This function allows you to modify the BIOS setting of multiple clients at the same time. Please select one or more clients and click “**Option**” to retrieve current settings.

(1) Advanced

The Advanced menu items allow you to change settings for CPU or system devices.

- Trusted Computing
- CPU Configuration
- PCH Configuration
- SATA Configuration
- System Agent Configuration
- AMT Configuration
- USB configuration
- Platform Misc Configuration
- Onboard Devices configuration
- APM
- ASF Configuration
- Serial Port Console Redirection
- MCTP Configuration
- Network Stack Configuration

Example: Disable USB3 port1 through ASUS RMT

Step 1: Select “Advanced” tab

Step 2: Select item “USB3_1.”

Step 3: Select “Disabled” in pull-down menu

Step 4: Click “Apply” button

Step 5: Restart client(s) to apply new setting

The screenshot displays the ASUS Remote Management Tool (RMT) interface, version 2.0.0. The main window is titled "ASUS Remote Management Tool Ver:2.0.0" and features a navigation menu at the top with tabs: BIOS Setting, H/W Monitor, DMI Information, BIOS Update, Windows Control, Boot Order, Device Manager, Software Inventory, HW Info, and Deployment Manager. The "BIOS Setting" tab is active, showing a list of BIOS items and their values. The "Advanced" section is selected, and the "USB3_1" item is highlighted. Its value is set to "Disabled", and a pull-down menu is open, showing "Disabled" and "Enabled" options. Below the list, there is a "Disable USB port." label and three buttons: "Load Default", "Option", and "Apply". The bottom of the interface shows a log of system events and a "Disconnect" button.

Item	Value
Intel xHCI Mode	SmartAuto
EHCI Hand-off	Disabled
USB3_1	Disabled
USB3_2	Disabled
USB3_5	Enabled
USB3_6	Enabled
USB3	Enabled
USB4	Enabled
USB7	Enabled
USB8	Enabled

2015-08-17 11:22:57 : NA : NA : Service version.2.0.0 : 0 [info]
2015-08-17 11:23:39 : NA : NA : Start server success : 0 [info]
2015-08-17 11:23:42 : NA : ASUSSZ : Client Connect : 0 [info]
2015-08-17 11:27:01 : BiosSetting : ASUSSZ : start to get option list : 0 [info]

Note:

“Power On By PS/2 Mouse” or “Power On By PS/2 Keyboard” is available only on condition that PS/2 mouse/keyboard is plugged into the motherboard of your client.

(2) Monitor

The Monitor menu allows you to change the fan and Anti-Surge settings.

Step 1: Choose an item in the menu

Step 2: Enter a valid value in the blank (the valid range is shown below the blank)

Step 3: Click “Confirm” button

Step 4: Click “Apply” button

The screenshot displays the ASUS Remote Management Tool interface. The title bar shows "ASUS Remote Management Tool Ver: 2.0.0". The main menu includes "BIOS Setting", "H/W Monitor", "DMI Information", "BIOS Update", "Windows Control", "Boot Order", "Device Manager", "Software Inventory", "HW Info", and "Deployment Manager". The "H/W Monitor" menu is selected, and the "Monitor" sub-menu is active. A table lists various fan and temperature settings:

Item	Value
CPU Q-Fan Control	Enabled
CPU Fan Speed Low Limit	100 RPM
CPU Fan Profile	Manual
CPU Upper Temperature	70
CPU Fan Max. Duty Cycle (%)	100
CPU Lower Temperature	20
CPU Fan Min. Duty Cycle (%)	20
Chassis Fan 1 Q-Fan Control	Enabled
Chassis Fan 1 Speed Low Limit	600 RPM
Chassis Fan 1 Profile	Standard

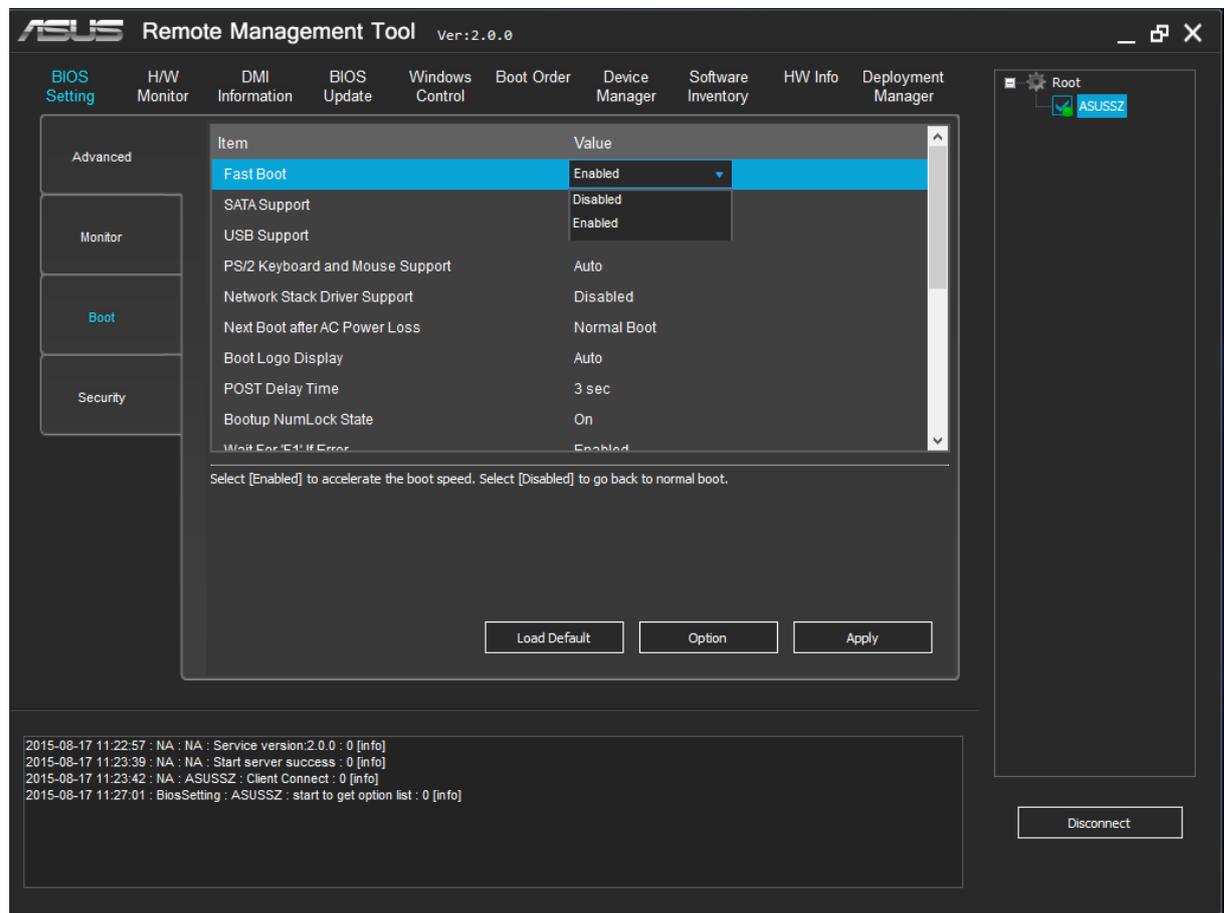

Below the table, a note states: "Set the maximum CPU fan duty cycle and CPU temperature upper limit. When CPU temperature reaches the upper limit, CPU fan will operate as max.duty cycle." At the bottom of the settings panel are buttons for "Load Default", "Option", and "Apply".

The right sidebar shows a "Root" menu with a checked "ASUSSZ" user. A "Disconnect" button is located at the bottom right. A log window at the bottom left shows system messages:

```
2015-08-17 11:22:57 : NA : NA : Service version:2.0.0 : 0 [info]
2015-08-17 11:23:39 : NA : NA : Start server success : 0 [info]
2015-08-17 11:23:42 : NA : ASUSSZ : Client Connect : 0 [info]
2015-08-17 11:27:01 : BiosSetting : ASUSSZ : start to get option list : 0 [info]
```

(3) Boot

The Boot menu allows you to change the settings of “Boot”.

Example: Disable Fast Boot through ASUS RMT

- Step 1: Select “Boot” tab
- Step 2: Select item “Fast Boot”
- Step 3: Select “Disabled” in pull-down menu
- Step 4: Click “Apply” button
- Step 5: Restart client(s) to apply new setting

(4) Security

The Security menu allows you to change Admin Password and User Password in BIOS.

A. Set New Password/Modify Password:

- Step 1: Select the client(s) need to be set new password/modify password
- Step 2: Enter a (new) password in the first blank
- Step 3: Re-enter the (new) password in the second blank and click “Confirm” button
- Step 4: Click “Apply” button
- Step 5: Click “Yes” on the pop-up dialog and restart client(s)

B. Delete Password:

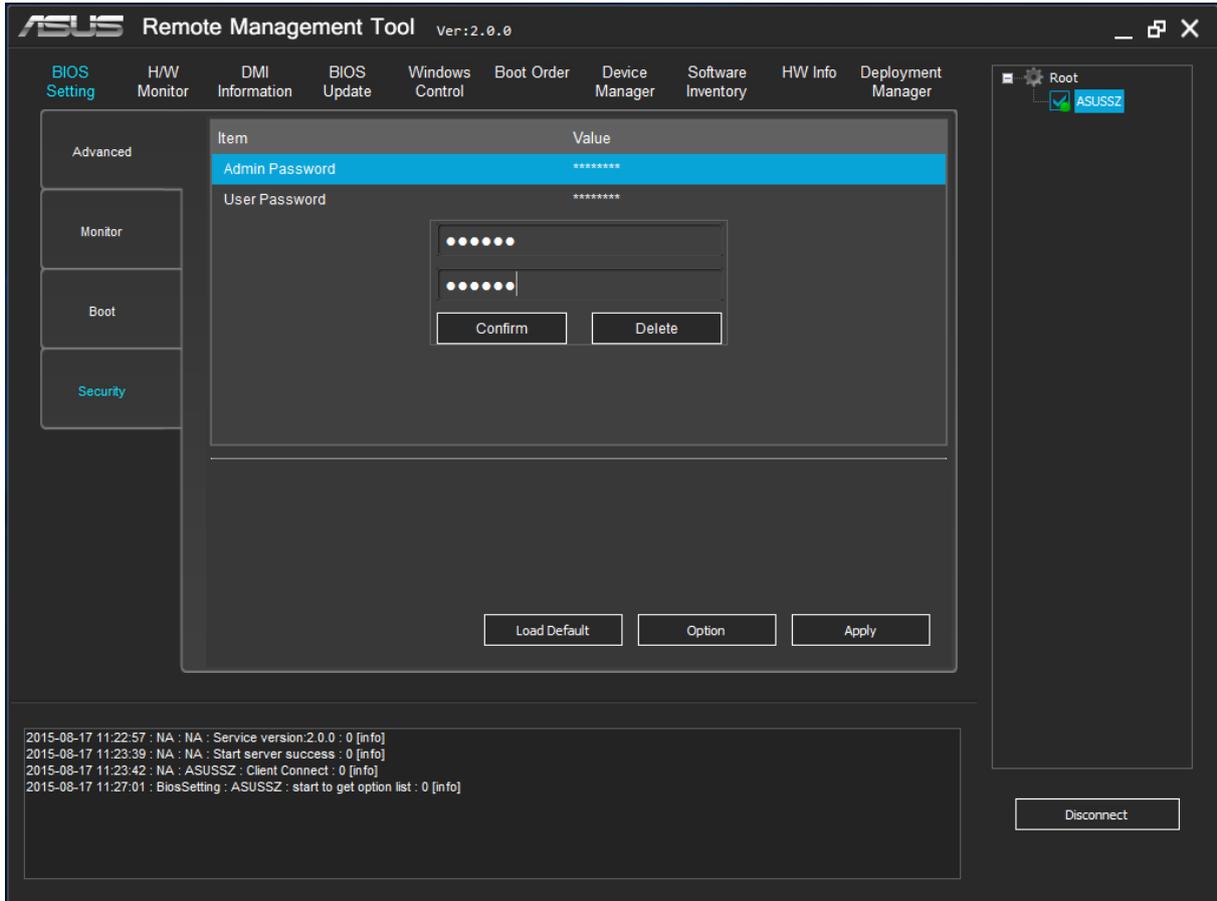

Step 1: Select client(s) need to delete password

Step 2: Click “Delete” button

Step 3: Click “Yes” on the next pop-up dialog

Step 4: Click “Apply” button

Step 5: Click “Yes” on the pop-up dialog and restart client(s)

4. DMI Information

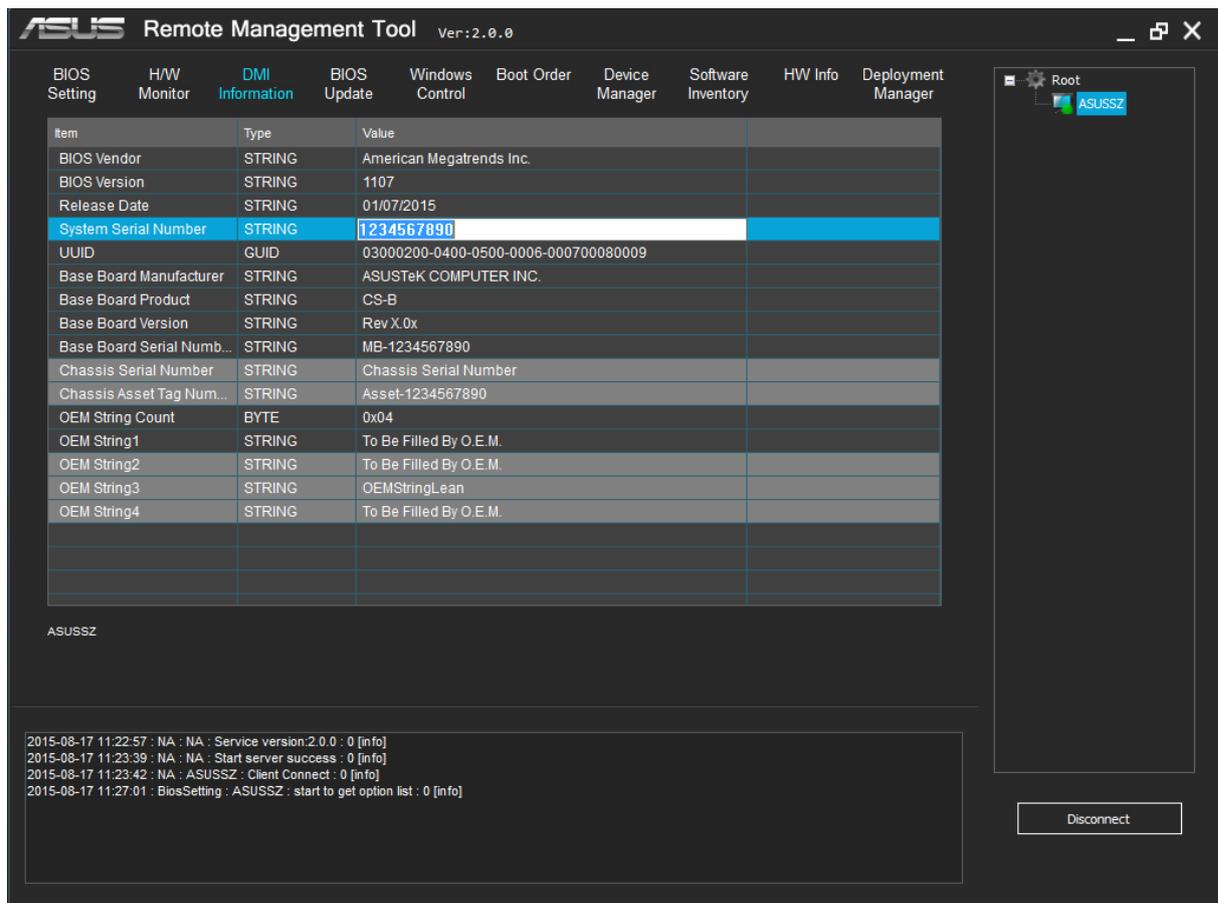

This function allows you to retrieve DMI Information of client PC and edit DMI string for different purpose.

Step 1: Choose a client

Step 2: Edit the item you need and press “Enter”

Note:

1. This function only supports one client at a time.
2. Only white areas are editable.
3. The following item can be changed only for one time: OEM String2, OEM String3.

5. BIOS Update

(1) Select a BIOS file from hard driver or USB flash. (the filename extension must be “.cap”)

(2) Click “Get Clients”, and select one or more PCs from the client list.

(3) There are two modes provided

a. Immediately Update

Keep the **Schedule** box blank and click the “Add” button

The screenshot shows the ASUS Remote Management Tool (Ver: 2.0.0) interface. The 'BIOS Update' tab is active. A table lists a client with User Name 'ASUSSZ', Board ID 'CS-B', and Version '9807'. The 'Schedule' dropdown is set to 'Immediately' and is highlighted with a red box. The 'Add' button is visible below the schedule field. The 'Get Clients' button is also visible. The interface includes various navigation tabs like BIOS Setting, H/W Monitor, DMI Information, Windows Control, Boot Order, Device Manager, Software Inventory, HW Info, and Deployment Manager. A log window at the bottom shows system messages.

Get Clients

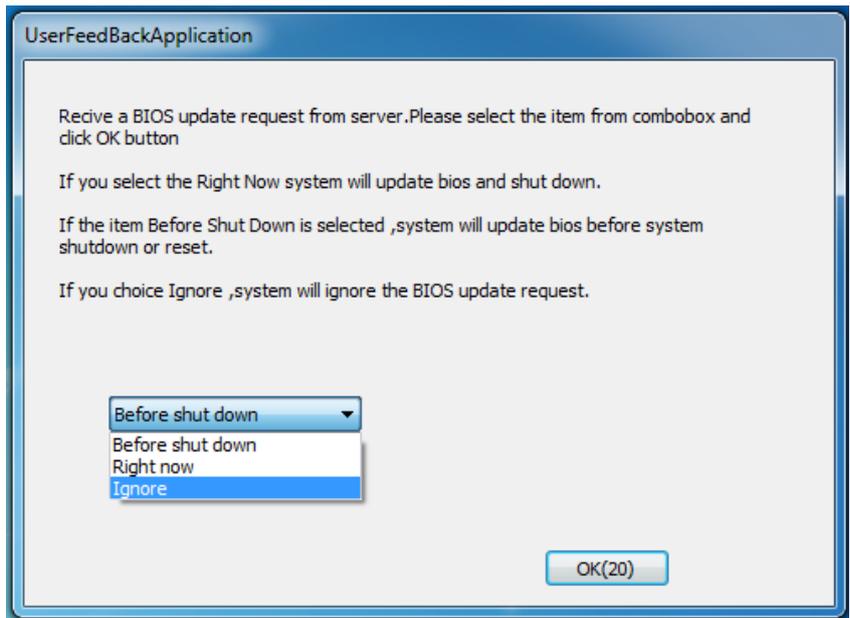

Disconnect

(4) After received a BIOS update request, the client will pop up a dialog box, you can choose to update bios “Before shut down” or “Right now” and you can also choose “Ignore” to ignore this update.

Note:

1. Multiple-client BIOS update can only be supported when all selected clients contain the same motherboard model.
2. Please select “Compatible Mode” if you want to update the client(s) to older BIOS version.

6. Windows Control

- (1) The RTC menu items allow you to generate a wake up or shut down event with set values.
- (2) The Power Control menu items allow you to Wake Up/Shut Down/Reset or put into Sleep/Hibernate for one or more clients.

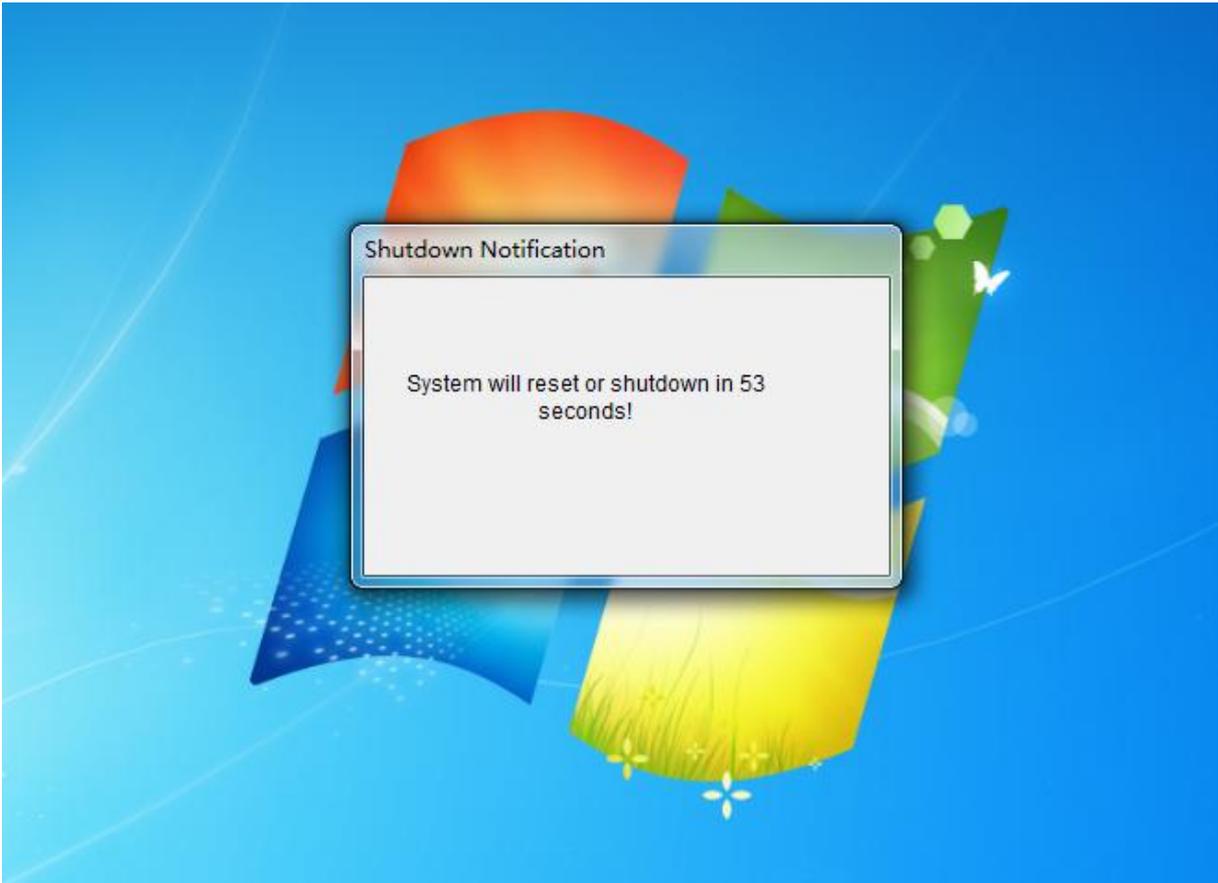

Note:

1. Please base on the time of your client when setting time among RTC menu.
2. “Disconnect” and “WinCtrl” in right click menu are only available for client which is highlighted in blue.
3. When the client shutdown or restart, the count-down prompt message is displayed to tell you that you can have 60s to save your work.
4. You can query the RTC set by task list.

The screenshot displays the ASUS Remote Management Tool (Ver: 2.0.0) interface. The 'Windows Control' tab is active, showing the 'RTC' (Real Time Clock) settings. The RTC is currently 'ON'. The 'Mode' is set to 'Week', and the 'Time' is set to 0:14:00. The 'Date' is set to Monday. The 'Power' section shows buttons for 'Wake Up', 'Sleep', 'Hibernate', 'Shut down', and 'Reset'. A right-click context menu is open over the 'ASUSSZ' client, showing options: 'Reconnect', 'Client Information', 'WinCtrl', 'Wakeup', 'Sleep', 'Hibernate', 'Shutdown', and 'Reset'. A table with columns 'User Name', 'RTC On', and 'RTC Off' is visible, but it is empty. The 'Disconnect' button is also visible at the bottom right.

User Name	RTC On	RTC Off

8. Device Manager

The H/W and versions show up and you can click the device to disable or enable it. You can also update driver under this interface

Example: Update USB3.0 driver

Step 1: Select “Intel(R) USB3.0 extensible Host Controller-0100”

Step 2: Right click and click “Update”

Step 3: Select “use .inf file”

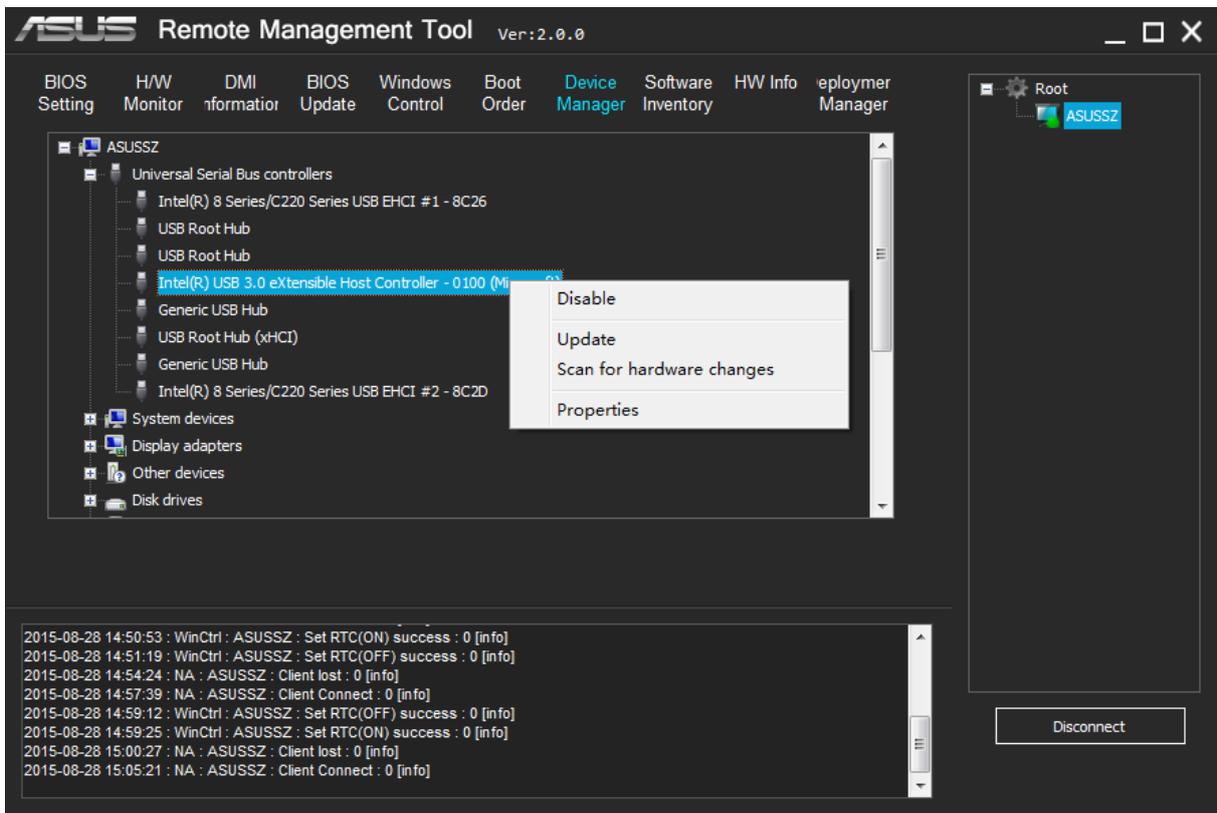

Step 4: Select the driver file you have packaged

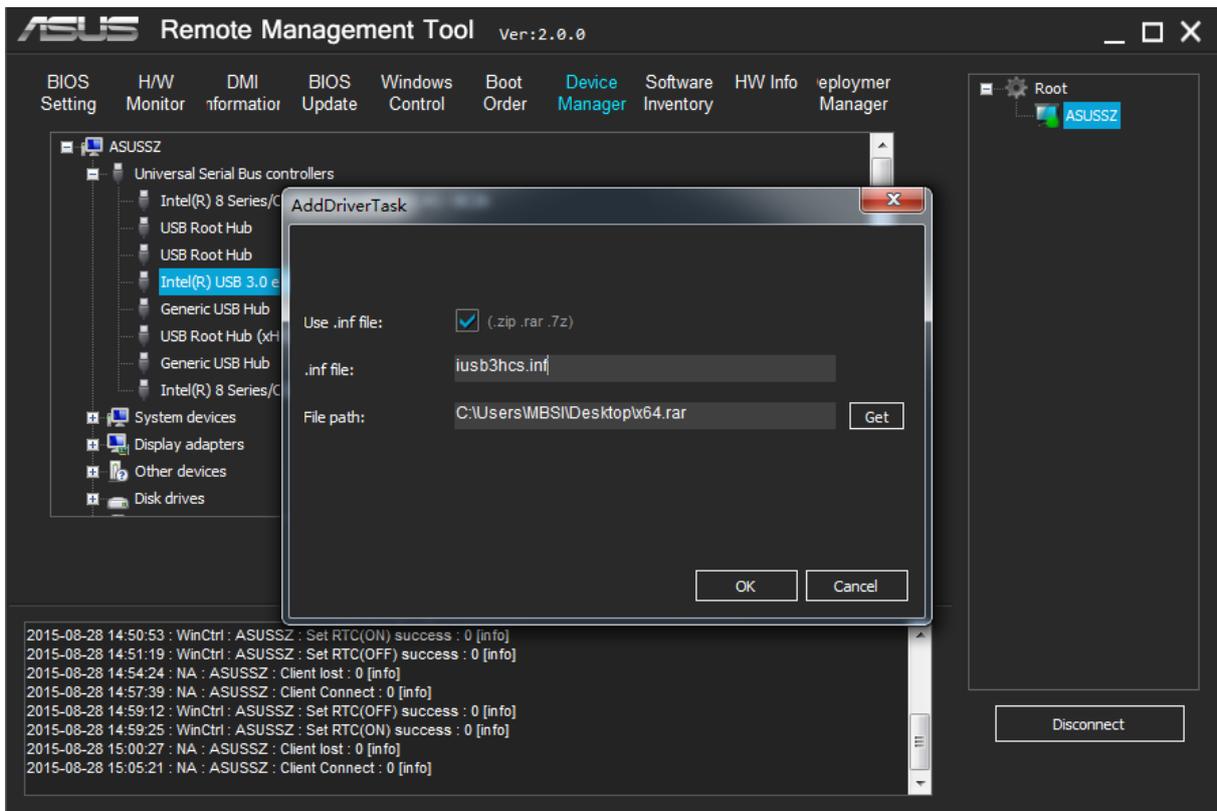

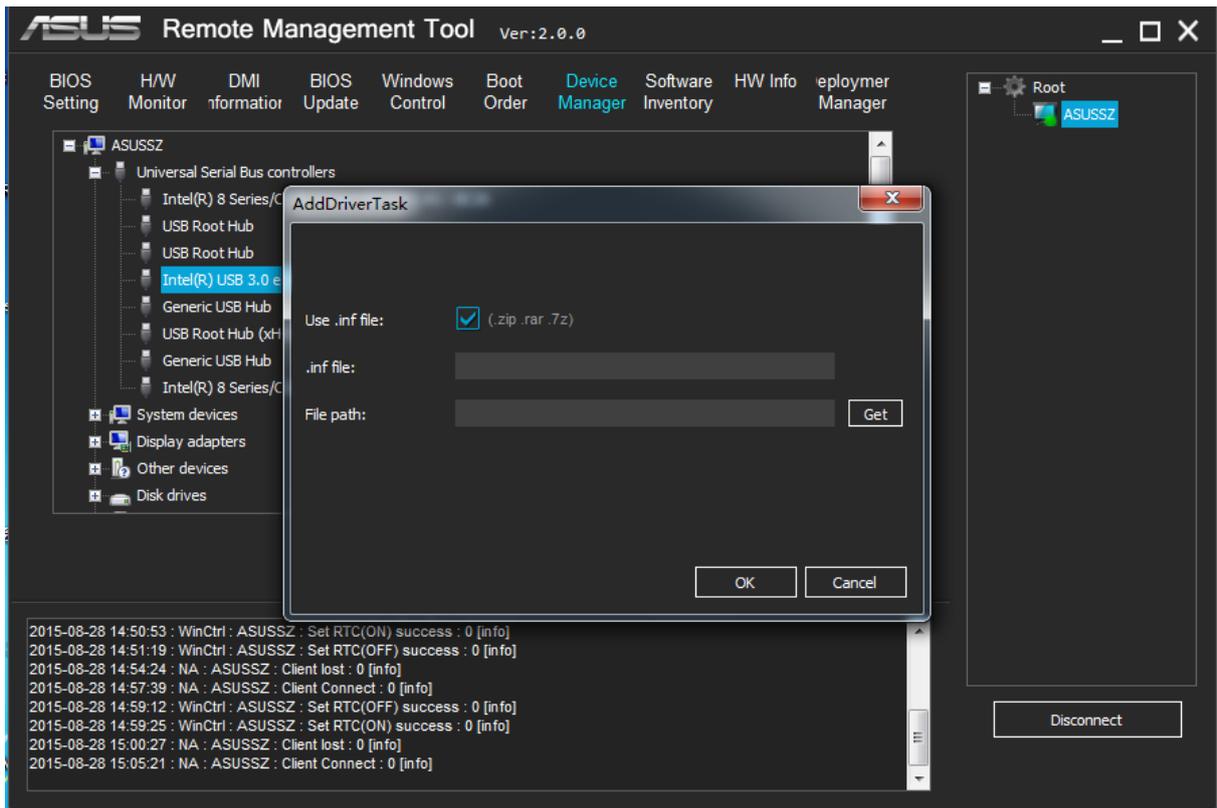

Step 5: Input the .inf name

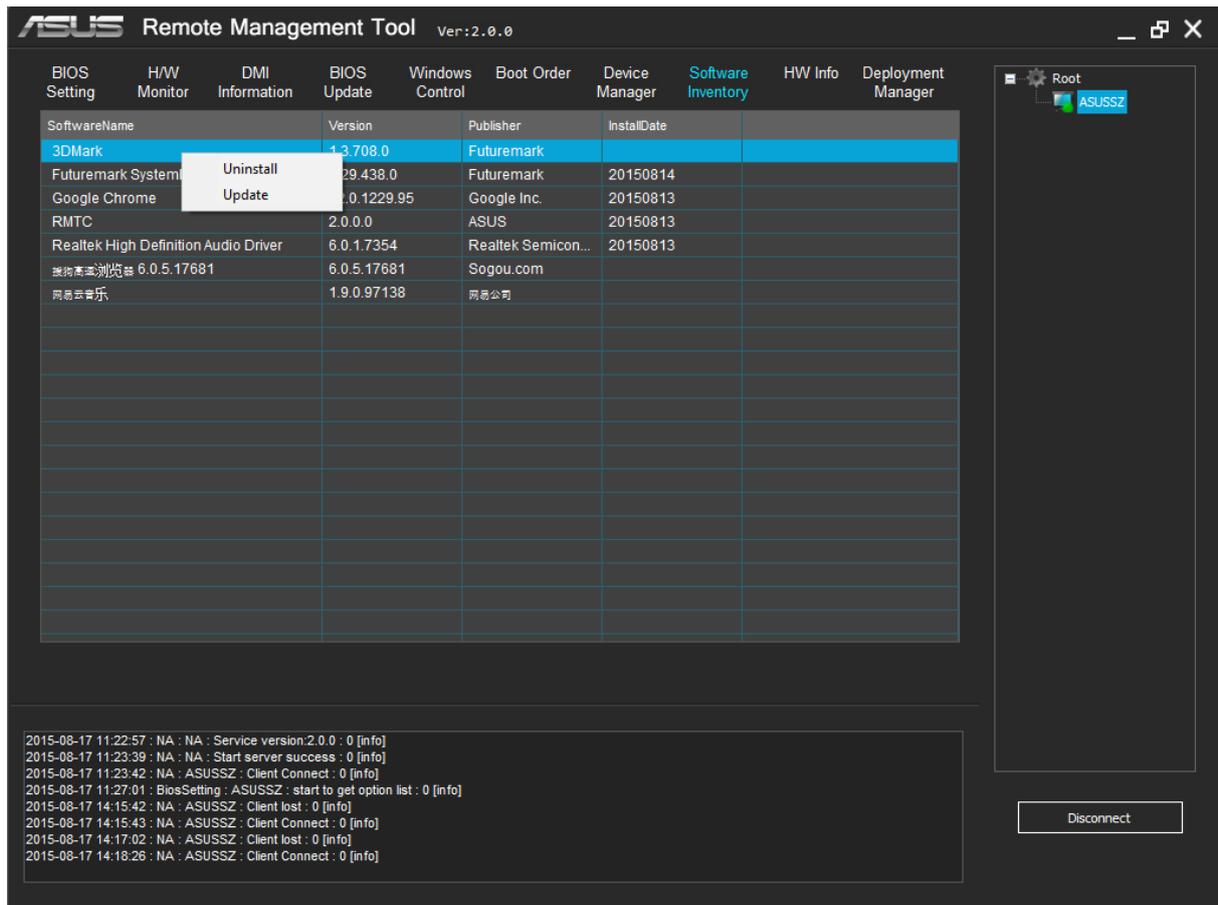

Step 6: Click “ok” button

Note:

You need to prepare corresponding driver files, in general case, including a “.inf ”file and a “.sys ”file。 Put the two files in one folder and package.

Example: uninstall “3DMark”

Step 1: Select the client

Step 2: Select the “3DMark” and right click

Step 3: Click the “Uninstall”

Step 4: Input command line if have

Step 5: Click “OK” button

10. HW Info

This part shows some information about CPU, VGA, DRAM, etc.

The screenshot displays the ASUS Remote Management Tool (ASUS RMTool) interface. The title bar reads "ASUS Remote Management Tool Ver:2.0.0". The navigation menu includes: BIOS Setting, H/W Monitor, DMI Information, BIOS Update, Windows Control, Boot Order, Device Manager, Software Inventory, **HW Info**, and Deployment Manager. The "HW Info" section is active, showing a list of hardware components on the left: CPU, ODD, VGA, DRAM, and HDD. The "CPU" component is selected, and its details are shown in the "Information" panel:

Property	Value
Name	Intel(R) Core(TM) i5-4590S CPU @ 3.00GHz
Caption	Intel64 Family 6 Model 60 Stepping 3
NumberOfCores	4

At the bottom left, a log window shows the following messages:

```

Disconnect

11. Deployment Manager

This function allows you to remotely install an application.

Example: install “sogou_pinyin”

Step 1: Select the client

Step 2: Click “Add software task” button

Step 3: Select the application through the “get” button

Step 4: Input command line if have

Step 5: Click “Finish” button

The screenshot shows the ASUS Remote Management Tool interface. The top navigation bar includes: BIOS Setting, H/W Monitor, DMI Information, BIOS Update, Windows Control, Boot Order, Device Manager, Software Inventory, HW Info, and Deployment Manager (highlighted). The main area is titled "Current task" and contains a table with the following columns: ClientName, Mac, Type, Command, FilePath, and Download progress. The table is currently empty. Below the table, there is a button labeled "Add software task" (circled with a red '2') and a "Delete all" button. On the right side, there is a tree view showing a "Root" node with a sub-node "ASUSSZ" (circled with a red '1'). Below the tree view is a "Disconnect" button. At the bottom, there is a log window with the following text:

```
2015-08-17 11:22:57 : NA : NA : Service version:2.0.0 : 0 [info]
2015-08-17 11:23:39 : NA : NA : Start server success : 0 [info]
2015-08-17 11:23:42 : NA : ASUSSZ : Client Connect : 0 [info]
2015-08-17 11:27:01 : BiosSetting : ASUSSZ : start to get option list : 0 [info]
2015-08-17 14:15:42 : NA : ASUSSZ : Client lost : 0 [info]
2015-08-17 14:15:43 : NA : ASUSSZ : Client Connect : 0 [info]
2015-08-17 14:17:02 : NA : ASUSSZ : Client lost : 0 [info]
2015-08-17 14:18:26 : NA : ASUSSZ : Client Connect : 0 [info]
```

If the installation files are two or more, you need to package them and use the following steps.

Example: install “RMT Sever”

Step 1: Select the client

Step 2: Click “Add software task” button

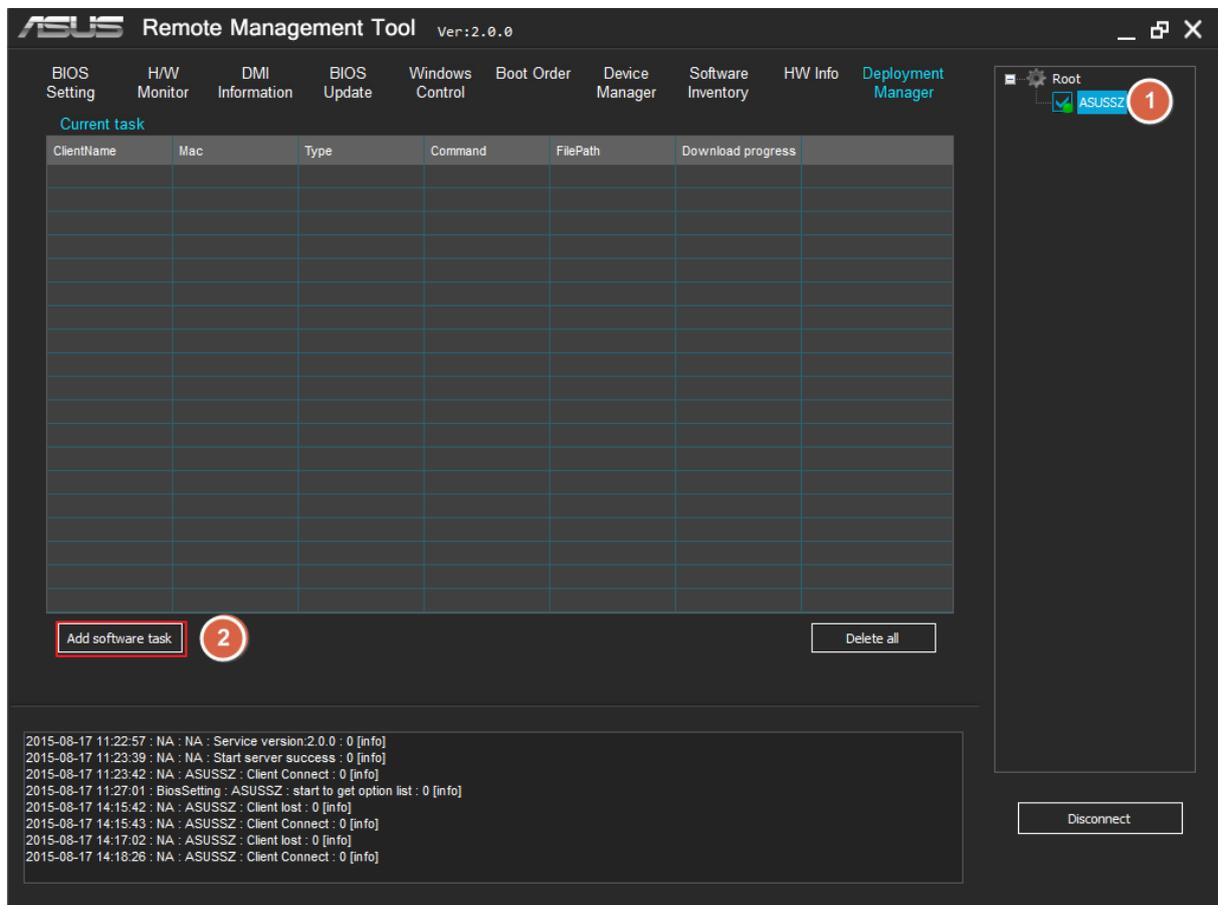

Step 3: Select the package through the “get” button

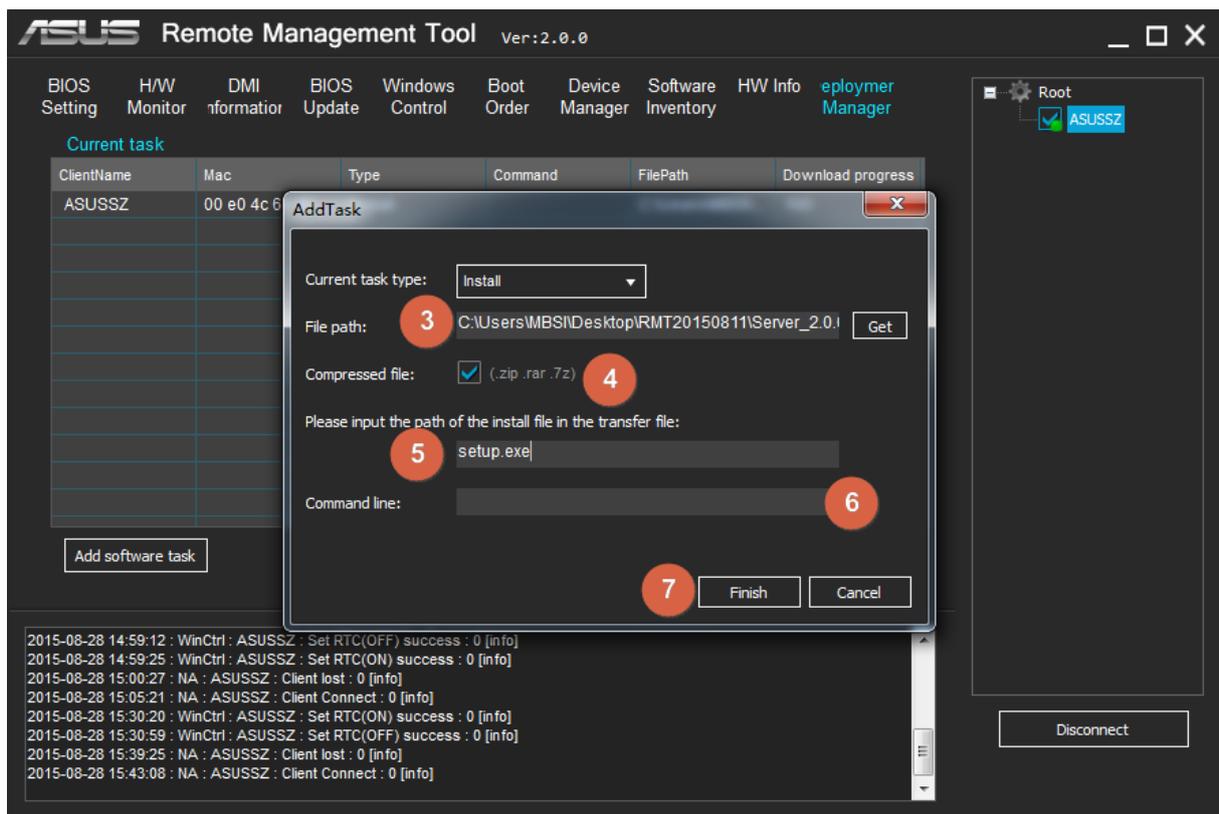

Step 4: Select the “.zip .rar .7z”

Step 5: Input the path of the install file in the transfer file (usually a .exe)

Step 6: Input command line if have

Step 7: Click “Finish” button

Note:

Corresponding command line is necessary for silent installation and uninstall.

IV.FAQ

If you have question in using this tool, the table below may give you some help:

Item	Log Content	Description/Explanation/Solution
Main	More than one component with the same ID exist!	Files under \Server_0.0.*\components has been changed, please replace it by original files.
	Out of memory	System is out of memory, please add more.
	Redirected client count	Show the total number of clients which have been redirected with new IP or Port.
	Stop server fail	The port of your Server may be occupied by other application.
	Invalid database file	Database files have been damaged. Please replace it by \Server_0.0.*\DB\db.mdb
	unable to open client update package file	Check whether the Clientpackage folder exists. And be sure that the configuration of config.ini is correct.
	unable to open the client package version config file	Check whether the version.ini exists. And be sure that the configuration of config.ini is correct.
	Load Client Task Version configure file: the same task	The ID in Version.ini is repeated.
	DB Exception: *****	Error in accessing to database. The subsequent information will show the detail reason.
	Memory exception: *****	Error in accessing to database. The subsequent information will show the detail reason.
memory Exception occur: *****	Error in accessing to database. The subsequent information will show	

		the detail reason.
Main	Database Version check FAIL (Query:%08X,current:%08X) Please check your database file, Maybe you need to update it.	The version of database file can't match with program of Server, please update it.
	The components of client are incompatible with the server!	The client version is outdated, please update it.
	Check DB Table ** FAIL	Please make sure that the version of database files are the same.
BIOS SETTING	Unsupported	Be sure that the bios BIOS file using in your client is special bios.
	***** --the same selection or value	The set value is the same with the current value.
	***** --unexpected selection or value	The set value is invalid.
	***** --unexpected token	Unrecognized BIOS item.
	***** --change value fail	Setup fail.
BIOS Update	invalid file size	Invalid BIOS CAP file.
	No EFI Capsule Header is found	Invalid BIOS CAP file.
	Can't find signature in BIOS image	Invalid BIOS CAP file.
	Update BIOS fail (Failed to securely load BIOS.)	BIOS file corrupted.
	Update BIOS fail (Security verification failed.)	Security verification failed.
CLIENT UPDATE	ClientUpdate Function is disabled!	Clientupdate function is disabled in config.ini.
DMI	Unsupported	Error in DMI module initializing.
	Command is refused or network transmission error occur	This error may occur in BIOS Update/Client Update.
HWM	Set refresh interval fail	The set value is too high or config.ini file is read only.
	Fail to write configuration file	Check whether the config.ini file is read only.

WIN CTRL	Command is refused!	Check whether the bios BIOS file using in your client is special bios.
	Command is refused!	Note: When using week mode, please select one day at least.
	Set RTC(OFF) fail	Note: When using week mode, please select one day at least.
	The network initialized fail for Wakeup on LAN. This function is disabled!	Create UDP socket fail or port is occupied by other application.
	Unable to send magic packet	Create UDP socket fail or port is occupied by other application.
