

## Where is my Windows 8 Product Key or COA?

---

### Where is the Product Key?

Microsoft made an improvement to its activation process in Windows 8 meaning all machines built with this operating system installed no longer have a COA label affixed to them. A digital key is incorporated into the BIOS of the machine by Stone Computers in the factory.

You can still see that your machine is licensed for Windows 8 by the small logo label, usually affixed underneath your machine if your machine is a notebook.

Applies to:

- All systems shipped with Windows 8.x
